Running head: On the spatially explicit Janzen-Connell effect

Key words: competition; simulations; phylogeny; species-abundance distribution; spatial explicit model; Janzen-Connell; phylogenetic relatedness effect; biodiversity; species-area relationship.

Type of article: Letter

Data archival location: Once the manuscript is accepted, the data will be stored in Dryad and the data DOI will be included at the end of the article.

Abstract word count: 149

Main text word count: 4988

Text box word count: 0

The number of references: 49

The number of figures, tables, and text boxes: 5

Fundings: This research is funded by the China Scholarship Council (CSC) and the Netherlands Organisation for Scientific Research (NWO)

Author contributions: RSE conceived the idea for the study. LX and RSE designed the model, HH developed the code and LX performed simulations. LX and RSE

analyzed the results. LX wrote the first draft of the paper while RSE contributed to revisions.

Acknowledgments: We thank Xiaoguang Du performed preliminary analyses with a first version of the model. We thank the Netherlands Organization (NWO) for financial support through a VICI grant awarded to RSE and the China Scholarship Council for financial support of LX. Furthermore, we thank the Center for Information Technology of the University of Groningen for their support and for providing access to the Peregrine high performance computing cluster.
