

Feedback / Suggestions:					
This is really abstract. I don't understand why and what we are doing.	#confused/unclear				
Good. However, it doesn't seem like what the students will actually be doing with the images has much to do with astronomy: mostly image editing. I'm not sure if there is a way to fix that easily though.		#more astronomy	#cool		
Sounds like this could be a pretty cool project as long as we'll learn to understand and analyze the data we collect and not just perform operations with it.			#cool		
More examples					
Maybe explain it a little more clearly.	#confused/unclear				
It looks like a cool project.			#cool		
it's everything very cool			#cool		
Make a 1 five minute movie out of it to get people excited					
Sounds good. It seems like a lab suited for very driven students, perhaps think about how to engage students who aren't already motivated?			#cool		
Showing an actual example of a lab like this that has been done would help to understand how it really works	#confused/unclear				
I like this			#cool		
I don't really like the name "oldAstronomy". Besides that, I love this project.			#cool		
The final paper might be less fun, I'm sure students would enjoy the other options better				#other final projects	
I think that this lab seems cool, but the procedure should be a little more clear	#confused/unclear		#cool		
Be more elaborate while explaining the setup of the lab please	#confused/unclear				
I appreciate that I learned about the websites discussed very interesting.			#cool		
I have never seen a website quite like zooniverse, so I believe that it will be an engaging experience to work on it.			#cool		
Very good idea but still needs a bit of fine tuning.			#cool		
I don't exactly understand the premise of this project. Will our papers expand on the published scientific paper or are they an expansion on the paper? Can we use sources other than the paper?		#more astronomy		#final paper book report?	
It is a great idea, but can run into trouble with how many students contribute and how well the pictures and papers are done.			#cool	#final paper book report?	#worried about pictures
I don't see any real benefit for students completing this lab- it seems like we are just helping you and getting nothing out of it for ourselves.				#grunt work	
Be careful of students thinking they're just doing the busy work for scientists who don't want to do it.		#more astronomy		#grunt work	
Looks cool			#cool		
The project seems really interesting and using the website once it's up and running			#cool
